Adaptation, National Institute for  
Environmental Studies, Tsukuba,  
Ibaraki 305-8506, Japan

Deadline for manuscript  
submissions:

**closed (31 August 2022)**

### Message from the Guest Editor

During the spread of SARS-CoV-2 (COVID-19) in many parts of the world, normal life came to a standstill. This resulted in partial or complete lockdown for all types of industries, vehicle movement, and people's activity, perhaps for the first time in modern history. For a long time, it has been stated in the literature that increased industrialization and anthropogenic activities has been polluting the atmosphere, hydrosphere, and biosphere. Because the industries and people's activities were shut off for long periods at many places, there was some improvement in the water quality of many polluted lakes, rivers, and other aquatic systems.

This Special Issue will look at the impact of COVID-19 lockdown and improvements in surface water quality in different systems. Topics highlighting the link between pollution level in surface water resources and COVID-19 by means of measurements in physicochemical variables or using remote sensing technologies are welcome.

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
