## Management and Monitoring of Urban and Rural Ecological Water Resources

Guest Editors:

**Prof. Dr. Jenn Kai Tsai**

Department of Electronic Engineering National Formosa University, Yunlin 632, Taiwan

**Prof. Dr. Charles Tijus**

Human and Artificial Cognition Lab, University of Paris 8, Saint-Denis, France

**Prof. Dr. Wei-Ling Hsu**

School of Urban and Environmental Science, Huaiyin Normal University, China

### Message from the Guest Editors

Water and soil resources are the foundation for human survival and sustainable development. With rapid economic development and increasing population, humans are developing and using water and soil resources at an unprecedented speed, which has caused a series of environmental and ecological problems. The main goal of this Special Issue is to discover new scientific knowledge on relevant water topics. It is our pleasure to invite work that explores solutions for water resource management or research cases. They should focus not only on the impact of water resource management and process efficiency on urban and rural development, but also on how they affect urban and rural environments. Potential topics include, but are not limited to the following:

Deadline for manuscript submissions:

**closed (30 November 2021)**

- Sustainable development
- River basin planning
- Water, river, and lake monitoring in surrounding urban-rural areas
- Water resources mapping and GIS
- Urban and rural planning
- Water reuse
- Water quality analysis
- Rivers and lakes
- Water supply and distribution systems
- Multiple water resources to characterize key urban-rural areas eco-economic

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
