submissions:

closed (31 October 2025)

Message from the Guest Editor

Drinking water resources are limited worldwide, and the United Nations estimates that the availability of clean and safe drinking water could decrease by up to 40% in the coming decade. The quantity and quality of water resources are crucial to the health of the population and all sectors of the economy, and they are, therefore, a determining factor in preserving society's standard of living. Improvements in the quality of water resources can be achieved by reducing the impacts of municipal and industrial wastewater and agricultural pollution on surface and groundwater. Today's water management strategies must be based on modern methods of wastewater and stormwater treatment. An important aspect is the treatment of wastewater at the point of generation; thus, the search for modern, rational methods of treating wastewater and rainwater, e.g., from roof slopes, is one of the most important environmental engineering challenges.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
