submissions:

closed (31 March 2022)

Message from the Guest Editor

Ecological succession has been a central theme in ecology for more than 120 years. However, the mechanism underlying gut microbiota succession in aquatic animals remains elusive, especially at a relatively long-term scale (e.g., over host development). Although many studies indicated that both ecological and evolutionary forces could affect the succession of gut microbiota in terrestrial animals, much less is known about that in aquatic fish gut ecosystems. Fish encompass nearly one-half of the vertebrate diversity and are considered the most successful vertebrates evolved on Earth. Their successful evolution may not be possible without the help of gut microbiota. Fish, in turn, provide gut microorganisms with appropriate habitats and necessary nutrients and protect the gut microbiota from adverse disturbances (e.g., pathogen invasion)[...]

Special Issue

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
