## **Water Resources Management and Policy Development: International Security and Economic Relations**

Guest Editor:

**Prof. Dr. Norman A. Graham**

Center for European, Russian and Eurasian Studies and James Madison College of Public Affairs, Michigan State University, 842 Chestnut Road, East Lansing, MI 48824, USA

Deadline for manuscript submissions:

**closed (30 October 2018)**

### **Message from the Guest Editor**

As argued March 23<sup>rd</sup>, World Water Day, we face persistent drought (falling water tables and river flows), commonly unconstrained pollution and wasteful over-consumption, which means that water has become rarely cheap, increasingly unsafe, and, all too often, not readily available. Water scarcity has become a common problem, but so too has flooding and devastating environmental impact from rising tides and crumbling infrastructure—costal and throughout river systems. International disputes over draw off imbalances and inadequate transborder flows still threaten conflict and raise troubling security concerns, while economic development and prosperity are often hampered by failed water conservation and management, as well as ill-conceived policies. What are the prospects for increased innovation and imagination in management strategies and technology development?

## Editor-in-Chief

### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
