## Application of GIS Models and Remote Sensing in Water Quality Evaluation, Land and Coastal Zone Management

Guest Editors:

**Dr. Andi Besse Rimba**

Shibaura Institute of Technology,  
Tokyo, Japan

**Prof. Dr. Takahiro Osawa**

Yamaguchi University (Center for  
Remote and Application of  
Satellite Remote Sensing,  
YUCRAS), Ube City, Japan

**Dr. Saroj Kumar Chapagain**

Institute for Integrated  
Management of Material Fluxes  
and of Resources, United Nations  
University (UNU-FLORES),  
Dresden, Germany

Deadline for manuscript  
submissions:

**closed (31 January 2024)**

### Message from the Guest Editors

Dear Colleagues,

Remote sensing technology (RS) and Geographic Information Systems (GIS) take an essential role in achieving the UN's targets, especially Goal 6 (water), Goal 14 (life below water), and Goal 15 (life on land). Water quality may accelerate other goals, especially in land and coastal zone management.

This Special Issue will focus on applying remote sensing technology and Geographic Information Systems in water quality, land and coastal zone management. The aim is to compile the studies highlighting the RS and GIS application to propose a policy recommendation for achieving sustainability in water quality and land and coastal zone management. We welcome original research articles, study cases and reviews in several research areas focusing on water quality, land and coastal zone management (but are not limited to):

Remote sensing and GIS application in the coastal zone area;

Remote sensing and GIS application on natural water-related disasters;

Remote sensing and GIS application in fishing grounds;

GIS application on water ground modeling;

SDG water, land and coast related.

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
