

Water Quality Studies: Assessing the Presence of Nutrients and Pollutants

Guest Editors:

Dr. Sara Lehmann-Konera

**Dr. Anna Maria Sulej-
Suchomska**

Dr. Joanna Potapowicz

Deadline for manuscript
submissions:

20 January 2025

Message from the Guest Editors

Dear Colleagues,

Studies on water quality are particularly important for understanding the present and future environmental challenges occurring due to intensifying human activities and ongoing climate change. To fully understand the environmental changes around us and the possible risks associated with them, it is of paramount importance to develop an interdisciplinary approach to study both spatial and temporal (long-term and short-term) changes in the levels of pollutants in surface waters. In such a research method, special attention should be paid to not only the direct impact of human activities but also to changes in meteorological conditions that can cause a hydrochemical response in surface waters.

This Special Issue aims to publish papers on water quality studies, and we encourage authors to submit cross-disciplinary articles on observations of environmental change based on the chemical analysis of various types of surface water, and groundwater. [...]

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
