Deadline for manuscript submissions:

closed (15 May 2023)

# **Message from the Guest Editor**

Dear Colleagues,

Freshwater ecosystems that comprise less than 1% of the Earth's surface are under increasing pressure from climate change, extractions for human uses, and water pollution. The water management community needs new tools and thinking around how to adapt to these growing pressures. A broad range of strategies ranging from prescriptive minimum flows requirement to focus on iconic or umbrella ecosystem assets exists but most of them are in conflict with human uses. This special issue requests papers that explores adaptive water management with a focus on ecosystem health. The issue topics will range from how to better address the conflict between ecosystem health and human needs, advancement in modelling tools and case studies where adaptive management been implemented and their outcomes.

# **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and

Technology)
