# **Water Security and Governance in Catchments II**

Guest Editors:

## Dr. Fernando António Leal Pacheco

DG-CQVR-UTAD – Department of Geology, Chemistry Research Centre, University of Trás-os-Montes e Alto Douro, Quinta de Prados, 5001-801 Vila Real, Portugal

### Prof. Dr. Luís Filipe Sanches Fernandes

CITAB—Centre for the Research and Technology of Agro-Environment and Biological Sciences, Universidade de Trásos-Montes e Alto Douro, 5001-801 Vila Real, Portugal

## Prof. Dr. Marília Carvalho de Melo

- Vale do Rio Verde University, Três Corações, Minas Gerais, Brazil
- 2. General Director of Minas Gerais Institute for Water Resources Management, Minas Gerais. Brazil

Deadline for manuscript

# **Message from the Guest Editors**

Water scarcity, water pollution, and extreme events are increasing environmental and human health problems that require thorough attention worldwide. Taking the watershed as a representative unit for water management, the topic of water security and governance has become hot in recent years and is now prominent in the political agenda of many countries. The concerns about water security are usually fourfold: (1) the continuous changing mosaic of water shortage related to the balance between availability and the access and demand for ever more water; (2) flooding (coastal, river, flash, or glacier outburst floods), encompassing the causes, development, and impacts of flood events, as well as mitigation and restoration measures; (3) the human dimensions of water security in relation [...]

The purpose of this Special Issue is therefore to bring scientists into a discussion on water security and governance and their implications for urban and rural supplies of public water, as well as the prevention and mitigation of floods.

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

# **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

#### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
