

Monitoring of the Water and Soil Conservation Using Remote Sensing Techniques

Guest Editor:

Dr. Wenyi Sun

Institute of Soil and Water Conservation, Northwest A&F University/Chinese Academy of Sciences, Yangling, China

Deadline for manuscript submissions:

closed (1 September 2022)

Message from the Guest Editor

This Special Issue is a multidisciplinary intersection for perspectives on soil and water conservation, hydrology and remote sensing. It aims to disseminate new knowledge and promote the practice of soil and water conservation.

keywords

- dynamic monitoring and evaluation of soil and water losses
- identification of soil and water conservation measures
- modeling of soil and water processes
- damaged soil and water conservation measures
- evaluation of water and soil conservation service function
- remote sensing new technology in soil and water conservation
- dynamic monitoring and evaluation of soil and water losses
- identification of soil and water conservation measures
- modeling of soil and water processes
- damaged soil and water conservation measures
- evaluation of water and soil conservation service function
- remote sensing new technology in soil and water conservation

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
