# Water Management in Woody Crops: Challenges and Opportunities

Guest Editors:

### Dr. José Manuel Mirás-Avalos

Centro de Investigación y Tecnología Agroalimentaria de Aragón (CITA), Unidad de Suelos y Riegos (asociada a EEAD-CSIC), Av. Montañana, Zaragoza, Spain

### Dr. Juan Miguel Ramírez-Cuesta

Centro de Edafología y Biología Aplicada del Segura (CEBAS), Consejo Superior de Investigaciones Científicas (CSIC), Espinardo, 30100 Murcia, Spain

Deadline for manuscript submissions:

closed (31 March 2022)

# **Message from the Guest Editors**

Water conservation is paramount for the long-term sustainability of agroecosystems, especially in arid and semi-arid regions. In the case of woody crops, it is a serious concern due to the large extension of these crops in different climatic conditions and the high inputs required for growing them. Indeed, the optimization of water management is critical for agricultural sustainability, especially under actual climate change scenarios (higher air temperatures, more severe drought and heat waves), since crop yield, quality, and economic viability largely depend on water availability.

This Special Issue aims at collecting original and quantitative research on water management in woody crops, including:

- Research on irrigation management strategies aiming to save water while maintaining yield and crop quality;
- Studies of other cultural practices that allow for saving water in orchards;
- Studies focused on the effects of climate change on water availability for woody crops, either in the field or under controlled conditions;
- Works using novel techniques for estimating crop water requirements at different application scales, through remote sensing technologies.

## **Editor-in-Chief**

#### Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

# **Message from the Editor-in-Chief**

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
