Ecohydraulics for Healthy Water Solution

Guest Editor:

Dr. Abul BM Baki

Department of Civil and Environmental Engineering, Clarkson University, Potsdam, NY, USA

Deadline for manuscript submissions:

closed (30 June 2022)

Message from the Guest Editor

Research in ecohydraulics is currently growing rapidly around the world and becoming interdisciplinary. The ecohydraulics studies have put much effort into conservation measures such as natural-based solutions and modification of historic infrastructure towards a healthy aquatic ecosystem. This Special Issue in Water centers on ecohydraulics to restore the functions of the aquatic environment. The subject areas in this Special Issue are diverse and may originate from various scientific and engineering disciplines. This Special Issue will focus on the inter-correlations between aquatic species (e.g., fish, mussel) and hydraulics (i.e., habitat suitability); the interaction between flow/sediment transport and habitat structures (e.g., boulders, cylinders, vegetation, woody log); the hydrodynamics of fishways (e.g., nature-like, technical) for aquatic connectivity; the role of turbulence on aquatic species; mixing in rivers and its effect on aquatic species; the relationship between habitat metrics [...]

Editor-in-Chief

Dr. Jean-Luc PROBST

Centre de Recherche sur la Biodiversité l'Environnement (CRBE) UMR CNRS/UPS/INPT/IRD, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, Toulouse, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. Water invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to technological scientific domains and interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
