Deadline for manuscript
submissions:

closed (25 March 2019)

Message from the Guest Editor

Dear Colleagues,

Lakes are at the center of some of the world's most vulnerable ecosystems, and fish are among their most vulnerable biota. This is true for both natural lakes and for artificial reservoirs, some of which have been in existence for decades and others of which are appearing as new dams are constructed. Fish are key components of aquatic food webs, and they also provide important sources of protein for human diets, but they are very often ignored. This Special Issue considers the full diversity of these issues as they relate to fish in their lake habitats.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
