Prof. Dr. Jun Yao

College of life science, Taizhou
University, Taizhou 318000, China

Deadline for manuscript
submissions:

closed (31 October 2022)

Message from the Guest Editors

Landfill leachate, a kind of complicated wastewater generated from the decomposition of the landfill sites, is the main pollution source for the surrounding environment including soil and groundwater. The safe and environment-friendly treatment of landfill leachate has become an urgent issue. Currently, various methods are developed for landfill leachate pollution control and some successful case or project are reported. However, it still faces challenges in terms of the refractory and emerging pollutants in landfill leachate.

This Special Issue is designed to highlight the recent research progress on landfill leachate pollution control. Scientists are invited to submit their original research and review articles to this Special Issue.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
