Message from the Guest Editors

Dear Colleagues,

The objective of this Special Issue is to provide assessments of how specific technologies and interventions can support sustainable urban water management (or related concepts, such as integrated urban water management). Contributions may focus on particular technologies, policies, or anything that would act as a catalyst for a desired change. Social and cultural changes may also be considered. Assessments need to be integrated in nature and focus on important performance issues. Examples of technologies, which is by no means exhaustive, are rainwater harvesting, water sensitive urban design, wastewater recycling or the adoption of alternative business models as a catalyst for change in the urban water sector.

Dr Magnus Moglia

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
