## Toxic Cyanobacteria in Drinking Water: Impacts, Detection and Treatment

Guest Editors:

**Dr. Hangzhou Xu**

School of Environmental Science and Engineering, Shandong University, Qingdao 266237, China

**Dr. Yan Jin**

School of Municipal and Environmental Engineering, Shandong Jianzhu University, Jinan 250101, China

Deadline for manuscript submissions:

**closed (10 November 2022)**

### Message from the Guest Editors

Freshwater ecosystems are the most vulnerable to the combined pressure of anthropogenic activities and climate change. Cyanobacterial blooms increase turbidity and smother submerged aquatic vegetation. Cyanobacterial blooms will cause a cascade of changes in the composition and function of prokaryotic and eukaryotic plankton and thereby lead to declining quality of the aquatic ecosystems and disturb the trophic transmission of the food-web structure. Moreover, some harmful cyanobacteria may produce toxins and unpleasant odorant metabolites that interfere with the recreational function of lakes and the use of reservoirs for drinking water and pose a potential risk to humans and animals. Hence, it is very important to decrease the level of cyanobacterial bloom in freshwater ecosystems and enhance the removal of cyanobacteria and the harmful metabolites in drinking water treatment plants. [...]

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
