## Tracing of Nitrogen Using Stable Isotopes: From Precipitation to River and Groundwater Systems

Guest Editors:

**Dr. Ioannis Matiatos**

(Former) International Atomic Energy Agency, Vienna, Austria

**Dr. Wendell Walters**

Brown University, Providence, RI, USA

**Dr. Viviana Re**

Department of Earth Sciences, University of Pisa, Pisa, Italy

Deadline for manuscript submissions:

**closed (31 October 2022)**

### Message from the Guest Editors

This Special Issue encourages the submission of works aiming at studying the atmospheric and terrestrial aquatic compartments of the N cycle through the use of nitrogen isotope tracers. Research on the following topics is promoted: (i) source contributions to atmospheric nitrate; (ii) N atmospheric chemistry processes and wet deposition; (iii) sources of nitrogen pollution in rivers and groundwaters in relation to land-use practices; (iv) biogeochemical processes in ecosystems and their resilience to nitrogen pollution; (v) statistical modeling techniques to quantify N contribution sources in different compartments of the N cycle; (vi) N cycling in rivers on the spatial and temporal scale; and (vii) evaluation of the N-cascading impact of nitrogen deposition and pollution on water resources and ecosystems. Examination of these N aspects is critically important to enhance the implementation of beneficial land management and mitigation strategies toward a sustainable management and protection of water resources.

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
