Deadline for manuscript  
submissions:

**closed (30 September 2022)**

### Message from the Guest Editor

Dear Colleagues,

Increased industrialization and population growth have substantially enhanced the demand for sustainable water supplies. A large number of inland and coastal waters, particularly those located in the vicinity of urban areas, suffer from contamination due to anthropogenic activities. Therefore, the development of technologies for more rigorous water quality monitoring and application methodologies for accurate modeling of the fate and transport of contaminants in aquatic environments are of paramount importance.

This Special Issue aims to present a collection of experimental, computational, and monitoring studies pertaining to the physical, chemical, and biological processes influencing the fate and transport of anthropogenic and naturally occurring contaminants in aquatic environments. Particular emphasis is placed on studies investing the bioaccumulation, degradation, partitioning, and transformation of both legacy and emerging contaminants as well as fieldwork and modeling studies characterizing the mixing and transport processes in water bodies and their interactions with atmosphere and sediments.

Dr. Ali Saber

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
