Water Environment Governance and Restoration

Guest Editor:

Dr. Naiwen Li

State Key Laboratory of
Hydraulics and Mountain River
Engineering, College of Water
Resource & Hydropower, Sichuan
University, Chengdu 610065,
China

Deadline for manuscript
submissions:

closed (31 December 2022)

Message from the Guest Editor

Water is an indispensable resource; however, water pollution is becoming an increasingly critical concern as economic development continues at an upward trend. The present water pollution issue mainly concerns high levels of nitrogen and phosphorus leading to algal blooms, high levels of organic matter leading to black and odorous rivers, heavy metals leading to poor water quality, etc. Due to the limited nature of water resources, it is urgent that we learn how to effectively govern and restore the water environment.

In view of the above observation, this Special Issue will focus on manuscripts (research papers, reviews, short communications) related to water environment governance methods and restoration technology, which includes removal of nitrogen, phosphorus and algae, degradation of organic matter, and removal of heavy metals or other aspects related to water environment governance and restoration.

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
