Modern Charging Techniques for Electrical Vehicles

Guest Editors:

Dr. Hui Zhao

Department of Engineering, University of Cambridge, Cambridge, UK

Dr. Hongbo Li

1. Department of Light Source and Lighting Engineering, School of Information Science and Technology, Fudan University, Shanghai 200433, China 2. Power Grid Technology Research Department, Center for Basic Research and Plaform, CRRC (China Railway Rolling Stock Coperation) Zhuzhou Institute Co., Ltd, Zhuzhou 412001, China

Deadline for manuscript submissions:

closed (30 November 2022)

Message from the Guest Editors

Dear Colleagues,

Climate crisis, fossil fuel depletion, and energy security demands electric vehicles (EVs), and EVs require battery chargers.

The EVs are sensitive to the power density and power efficiency of the battery chargers; Vehicle-to-grid (V2G), can further support the grid and improve the power quality; vehicle-to-devices (V2D) can provide power/electricity to portable devices, such as portable refrigerator and cookers; vehicle-to-everything (V2X) enables the EV to use the batteries in EVs to charge other EVs, provide power to homes. Furthermore, inductive wireless charging, capacitive wireless charging, and laser EV charging expand our expectation on EV charging structure.

This special issue is devoted to discovering and exhibiting the recent development in the EV chargers. Technical papers and review papers are solicited on any subject pertaining to the scope of the EV chargers including, but not limited to, the following major topics:

- 1. Power electronic devices and advanced package techniques
- 2. Power conversion topologies, modeling, and control
- 3. Reliability modeling, fault protection and diagnostics
- 4. Wireless power transfer

Editor-in-Chief

Prof. Dr. Joeri Van Mierlo

MOBI—Electromobility Research Centre, Department of Electrical Engineering and Energy Technology, Faculty of Engineering Sciences, Vrije Universiteit Brussel, 1050 Brussel, Belgium

Message from the Editor-in-Chief

The World Electric Vehicle Journal is the official journal of the World Electric Vehicle Association (WEVA) and its members the European Association for Electromobility (AVERE), the Electric Drive Transportation Association (EDTA), and the Electric Vehicle Association of Asia Pacific (EVAAP). Since its foundation in 2007, the journal has aimed to provide a publishing platform for the academic and industrial world to share the latest developments and knowledge about electric vehicles. If you are developing Electric, Plug-in Hybrid, Hybrid Electric, or Fuel Cell Vehicles, we cordially invite you to consider us as the place for you to publish your latest results and innovations.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Ei Compendex, and other databases.

Journal Rank: JCR - Q2 (*Transportation Science and Technology*) / CiteScore - Q2 (*Automotive Engineering*)
