**closed (31 July 2023)**

### Message from the Guest Editors

Farmers' behavior can be influenced by economic factors, various institutional mechanisms such as legal instruments, economic rewards, counseling and voluntary collective action, or individual factors. Therefore, the purpose of this collection is to investigate the various socioeconomic variables and psychological factors affecting changes of behavior and farmers' decisions to reduce environmental degradation and lead them to proenvironmental behaviors.

In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

Socioeconomic and psychological factors affecting farmers' decision to adopt conservation agriculture;

Socioeconomic and psychological affecting farmers' adaptation to climate change;

Socioeconomic and psychological affecting farmers' decision to adopt water conservation;

Socioeconomic factors affecting decision making in farm management;

Socioeconomic factors affecting farmers' decision making in off-farm activities.
